2016 Natural Gas for High Horsepower (HHP) Summit Agenda Announced as Early Bird Registration Opens

The 2016 HHP Summit to focus on tightening emissions regulations for high horsepower operations and continued price stability of natural gas fuel for marine, mining, rail, E&P, and power gen applications

SANTA MONICA, CA — June 15, 2016 — Conference organizers of the fifth-annual [High Horsepower \(HHP\) Summit](#), North America's largest showcase of natural gas fueling and technology solutions for high horsepower applications, today released the agenda and opened early bird registration. The HHP Summit will take place October 11-13, 2016, at McCormick Place Convention Center in Chicago.

“Even with today's lower oil prices, high-fuel-use operations still have a significant opportunity to reduce their fuel costs and mitigate long-term price volatility. Experts throughout the world agree \$30/barrel is simply not sustainable for the global oil market,” noted Erik Neandross, CEO of Gladstein, Neandross & Associates, the clean transportation and energy consulting firm that produces the conference. “Beyond the economic benefits, clean-burning natural gas provides a cost-effective solution to meet increasingly stringent emissions regulations, not to mention an opportunity to simply be a more responsible and sustainable business operation.”

Year after year, the HHP Summit serves as the largest annual meeting place for high horsepower industry stakeholders to share insights from early adopter projects, discuss opportunities to collaborate on infrastructure and technology advancements, and to drive real, tangible progress in the natural gas market. This year's program will have an increased focus on emissions regulations, such as the Emissions Control Area regulations for marine, Tier 4 regulations for off-road engines, and the recently lowered National Ambient Air Quality Standards that impact the entire United States.

Educational sessions will present an inside look at current and planned natural gas projects in the marine, mining, rail, drilling, pressure pumping, and remote power generation sectors across North America and throughout the world. The HHP Summit expo hall will offer hands-on access to a wide range of natural gas engines, equipment and technology designed for high horsepower applications and have the opportunity to talk to representatives about engine and equipment specifications before making an investment.

Early bird registration offers attendees a huge savings opportunity with registration at \$495. For more information and to see the agenda, visit www.hhpsummit.com.

###

About the High Horsepower (HHP) Summit

HHP Summit is North America's largest and most comprehensive conference and expo focused on the environmental and economic benefits of natural gas for marine, mining, rail, drilling, pressure pumping, and remote power generation operations.

About Gladstein, Neandross & Associates (GNA)

GNA is the leading North American consulting firm specializing in market development for low-emission and alternative fuel vehicle technologies, infrastructure and fuels for both on and off-road applications. For more than 20 years, GNA has pioneered the nation's largest and most innovative alternative fuel vehicle projects, including the development of several successful clean fuel corridor projects. In addition to its technical consulting practice, GNA hosts North America's leading alternative fuel and advanced vehicle technology conferences—including the Advanced Clean Transportation (ACT) Expo, the Rethink Methane Symposium, and the High Horsepower (HHP) Summit. www.gladstein.org
